

FSA Winter Conference Workshop, December 3, 2025

# THE NEED FOR STRATEGIC STORMWATER ASSET MANAGEMENT TOOLS AND GUIDANCE

Mark Van Auken, PE, CPMSM, ENV SP  
ARCADIS Stormwater & GI Practice Leader

# Agenda

- Drivers for Asset Management (AM)
- Needs for Holistic Stormwater (SW) Asset Management
- Current National SW AM Research Project
- What's Next – Data Visualization/Analytics Tools
- Questions?

# Drivers for Asset Management

# Asset Management Definition – Adapted from US EPA

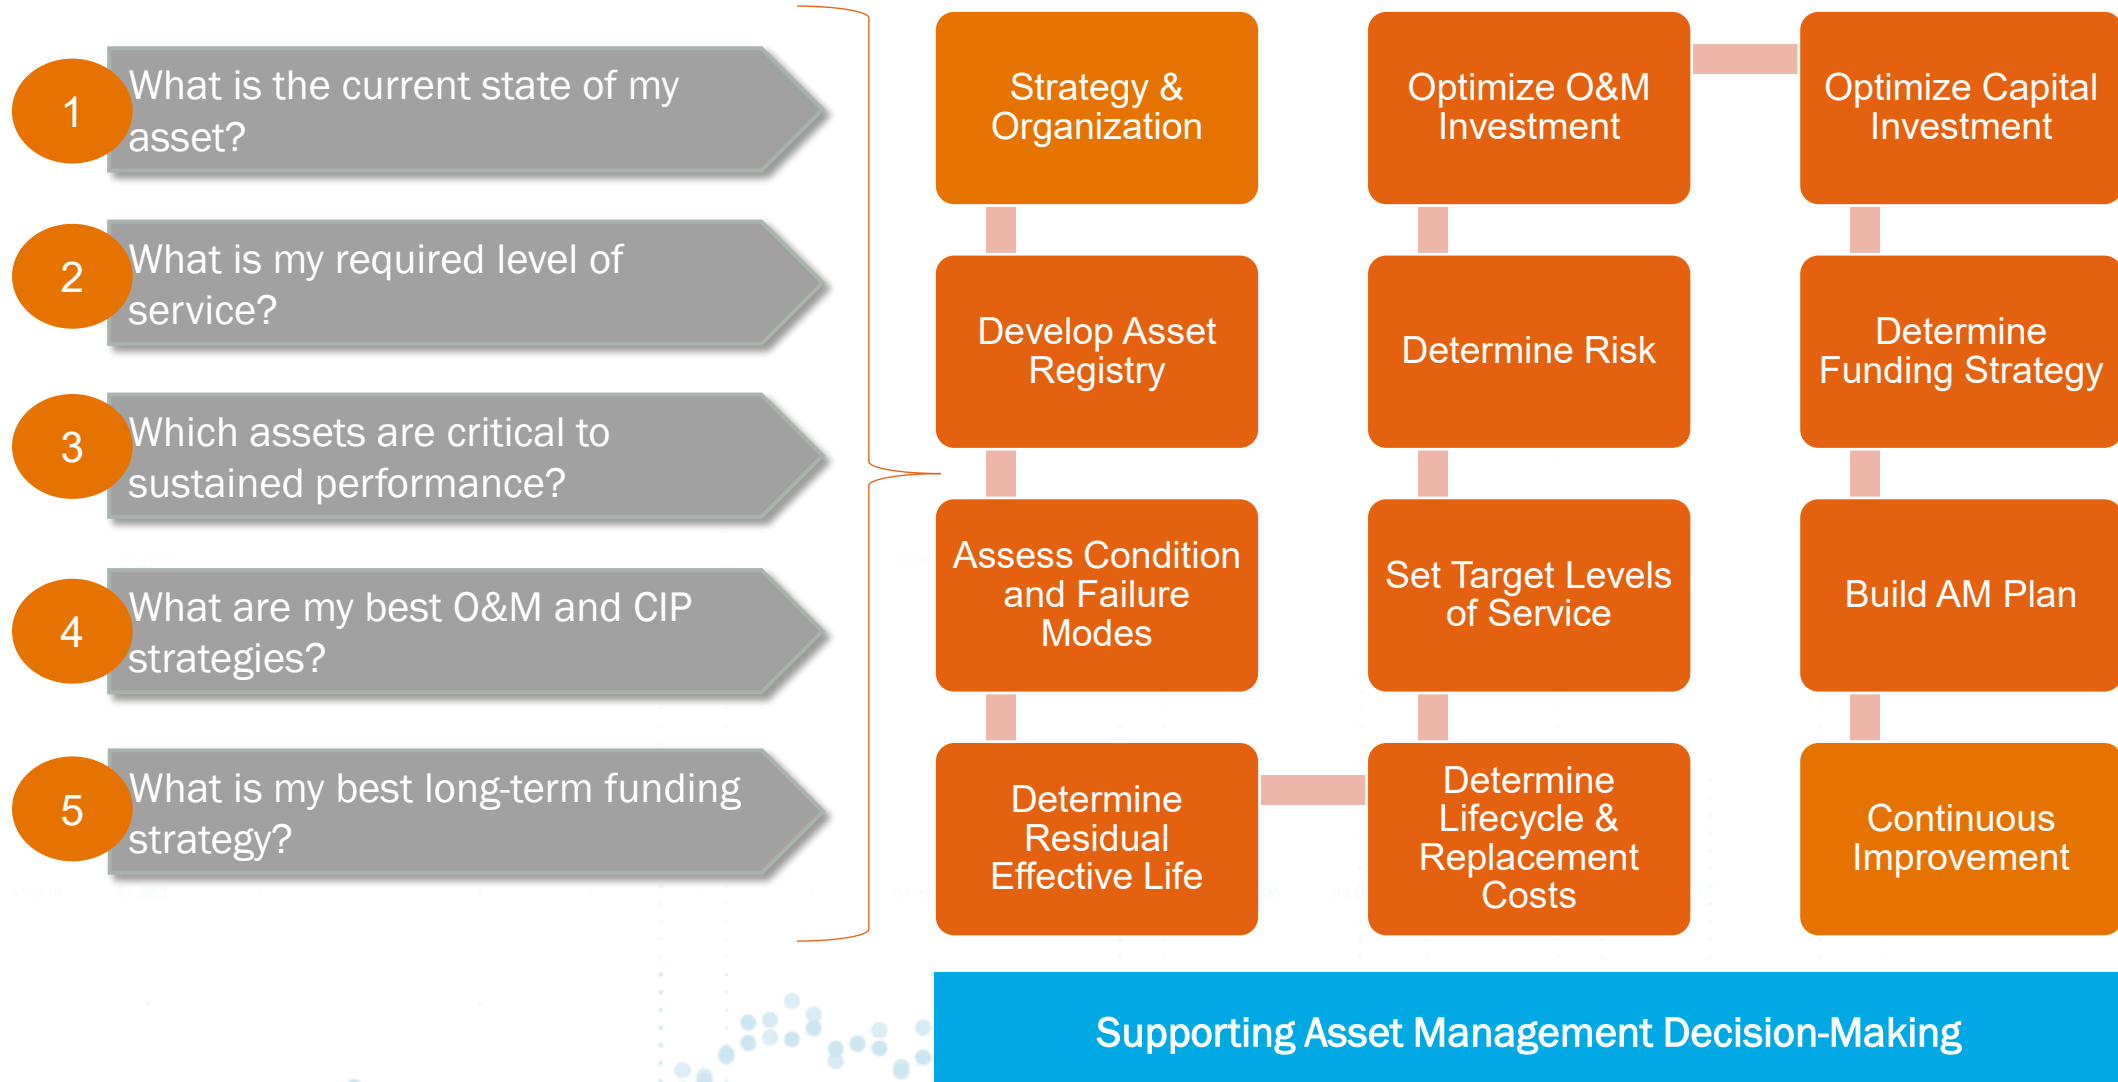

Asset Management is a body of *management practices* that:

- Is applied to the *entire portfolio of infrastructure assets* at all levels of the organization
- Seeks to *minimize total costs* of acquiring, operating, maintaining, and renewing assets
- Works within an environment of *limited resources*
- Delivers *service levels* customers desire and regulators require
- Targets that *acceptable level of risk* to the organization

# Benefits of Asset Management

- ✓ Informed asset investment decisions
- ✓ Managed risk
- ✓ Improved services and outputs
- ✓ Demonstrated social responsibility
- ✓ Demonstrated compliance
- ✓ Improved organizational sustainability
- ✓ Improved efficiency and effectiveness
- ✓ ***Real organizational savings (reduced borrowing costs, right-timed asset replacement, reduced asset failures)***

# Core Concepts of Asset Management

1

# Most Agencies Focus on Data Collection Only

## Service Levels Drive Needs and also Build Transparency and Stakeholder Relationships

SL Category	Issues
Reliability	<ul style="list-style-type: none"> <li>• Inlet, sewer &amp; culvert blockages/collapses</li> <li>• limited capacity</li> <li>• stream erosion</li> <li>• SCM issues</li> </ul>
Quality	<ul style="list-style-type: none"> <li>• odor, trash, excess vegetation complaints</li> </ul>
Customer Service	<ul style="list-style-type: none"> <li>• event response</li> <li>• call center performance</li> </ul>
Regulatory	<ul style="list-style-type: none"> <li>• permit compliance</li> <li>• water quality compliance</li> </ul>

Strategic Plan Elements		LOS Category and Measures
1	Ensure system and asset reliability and minimize interruptions	<b>Stormwater Collection</b> <ul style="list-style-type: none"><li>• LOS X1 Blockages/Collapses</li><li>• LOS X2 Property Flooding</li><li>• LOS X3 Discharge Compliance</li><li>• LOS X4 Event Response Time</li></ul>
2	Provide high quality service and effective response	
Key Performance Indicators		
<b>Operations and Maintenance</b> <ul style="list-style-type: none"><li>• Number of times assets were inspected</li><li>• Number of storm sewer lines, inlets &amp; SCMs cleaned/repared</li><li>• Work order completion ratio</li></ul>		

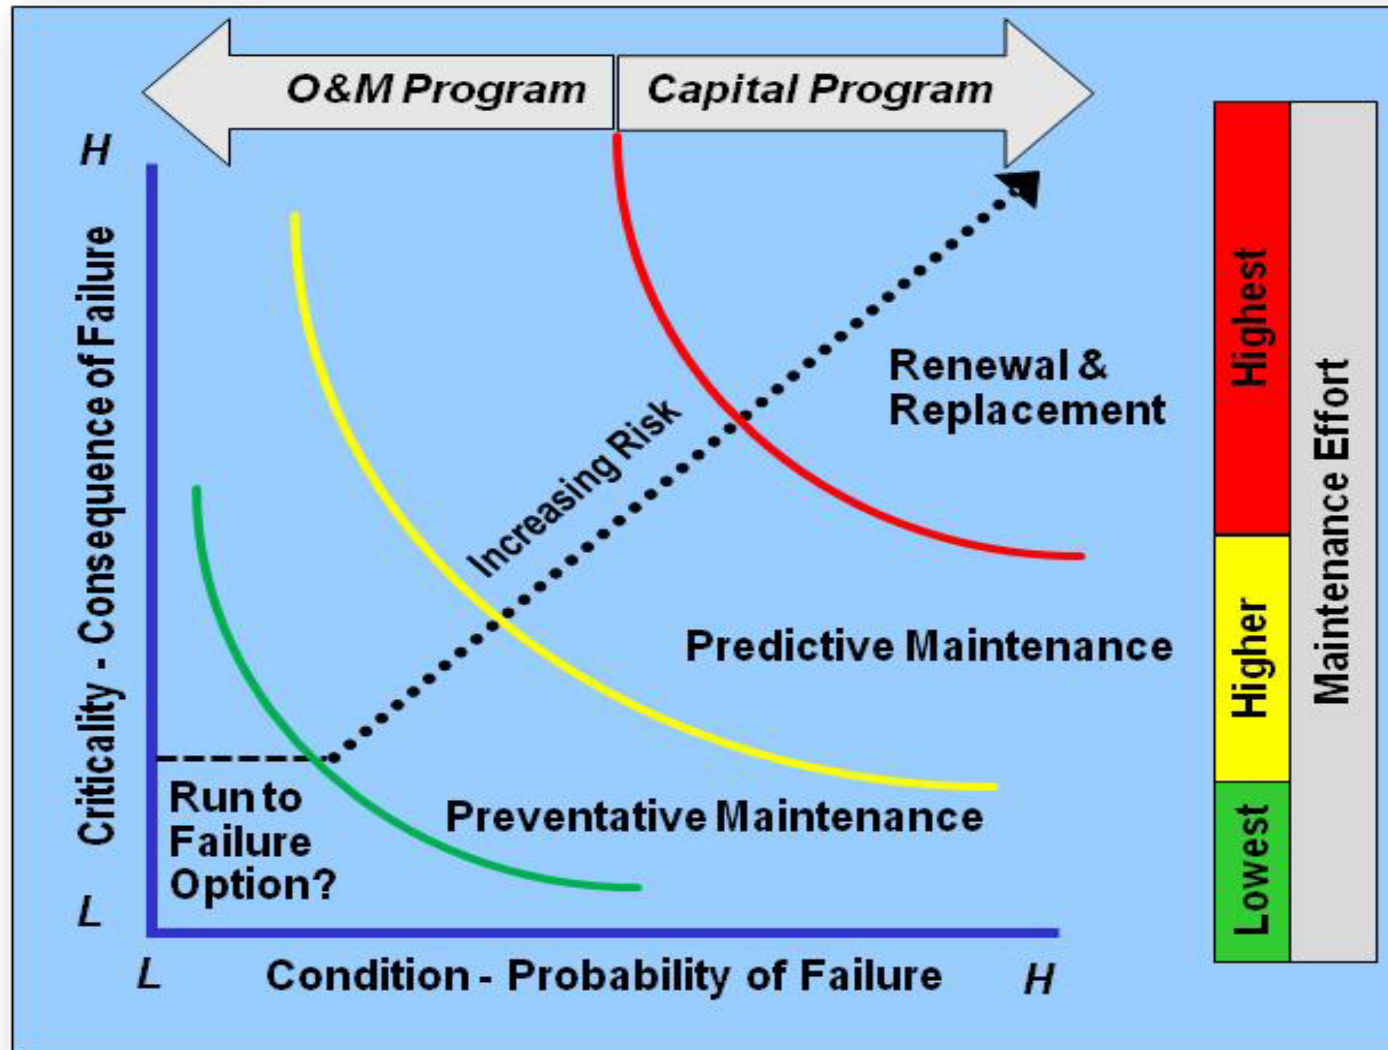

## A Key Focus of the Asset Management Process is Risk Based Evaluations

- Risk Is a Simple Equation:  
*Probability \* Consequence*
- Probability of Failure (POF)
  - Physical
  - Performance
- Consequence of Failure (COF)
  - Triple Bottom Line (economic, social, & environmental)

# AM Risk Assessment Supports O&M and Capital Funding Decisions

## Short- and Long-Term Financial Needs Drive Program Funding Structure

- Prioritize both system CIP and O&M
- Determine which projects or alternatives have the highest benefit to the utility
- Consider the most important and measurable project costs and benefits
- Consider Risk for existing assets and Risk of not acting

# Needs for Holistic Stormwater (SW) Asset Management

# The Benefits of Stormwater AM and Evaluating Business Risk

- Know more about your stormwater system assets
- Switch from reactive to proactive O&M
- Data driven evaluation of stormwater assets
- Positions you for regulatory compliance

# Historically Stormwater Asset Management Work has been Regulatory or Data Driven

- MS4 Permitting/ Compliance
  - Collection system/outfall
  - Water quality focused

- Data/GIS
  - Stormwater infrastructure
  - O&M focused

# Increased Resiliency to Flooding Requires Knowledge of Your SW System

>90% of the impacted structures from Hurricane Helene were outside of the traditional FEMA floodplain

# A Well-Defined and Holistic Asset Management Program is Highly Recommended

ASSET GROUP	 <p>Pipes</p>	 <p>Junctions/ Chambers</p>	 <p>Pumps</p>
ASSET TYPE	<ul style="list-style-type: none"><li>• Pipe</li><li>• Pipe Inlet</li><li>• Pipe Outlet</li></ul>	<ul style="list-style-type: none"><li>• Manhole</li><li>• Catch basin</li><li>• Junction box</li><li>• Drop inlet</li></ul>	<ul style="list-style-type: none"><li>• Pump</li><li>• Gate</li><li>• Valve</li></ul>
ASSET COMPONENT	<ul style="list-style-type: none"><li>• Manhole</li><li>• Catch basin</li><li>• Headwall</li><li>• Flume</li></ul>	<ul style="list-style-type: none"><li>• Walls</li><li>• Chimney</li><li>• Lid</li></ul>	<ul style="list-style-type: none"><li>• Motor (if &lt; 100 HP pump)</li></ul>

Familiar Assets

# A Well-Defined and Holistic Asset Management Program is Highly Recommended

ASSET GROUP	 <b>Open Linear Systems</b>		 <b>SCMs/GI</b>	
ASSET TYPE	<ul style="list-style-type: none"><li>• Ditch</li><li>• Channel</li><li>• Swale</li></ul>		<ul style="list-style-type: none"><li>• Rain gardens</li><li>• Bioswales</li><li>• Wet ponds</li><li>• Dry ponds</li><li>• Constructed wetlands</li><li>• Manufactured devices</li></ul>	
ASSET COMPONENT	<ul style="list-style-type: none"><li>• Check dams</li><li>• Vegetation</li></ul>		<ul style="list-style-type: none"><li>• Forebay</li><li>• Overflow/riser</li><li>• Channel</li><li>• Vegetation</li><li>• Structure protection</li></ul>	

Non-Traditional Assets

# Most SW Asset Categories Need Guidance

Stormwater Asset Category	Example Types of Assets	
Basins	<ul style="list-style-type: none"> <li>- Dry basins</li> <li>- Cisterns and rain barrels</li> <li>- Wetlands</li> </ul>	<ul style="list-style-type: none"> <li>- Wet basins</li> <li>- Vaults and swirl concentrators</li> <li>- Forebays</li> </ul>
Swales and Strips	<ul style="list-style-type: none"> <li>- Swales</li> <li>- Level spreaders</li> </ul>	<ul style="list-style-type: none"> <li>- Vegetated strips</li> </ul>
Filters	<ul style="list-style-type: none"> <li>- Surface and subsurface sand filters</li> <li>- Landscaped / vegetated roofs</li> <li>- Manufactured filters (boxes)</li> </ul>	<ul style="list-style-type: none"> <li>- Bioretention</li> <li>- Drain inlet inserts</li> <li>- Subsurface gravel wetlands</li> </ul>
Infiltrators	<ul style="list-style-type: none"> <li>- Infiltration basins</li> <li>- Dry wells</li> </ul>	<ul style="list-style-type: none"> <li>- Infiltration trenches and vaults</li> <li>- Permeable pavement</li> </ul>
Gross Pollutant Traps and Mechanical Operations*	<ul style="list-style-type: none"> <li>- Screens</li> <li>- Baskets</li> <li>- Hoods</li> </ul>	<ul style="list-style-type: none"> <li>- Nets</li> <li>- Racks</li> </ul>
(*note that this category of asset types may already be adequately addressed by industry standards like WRF's SIMPLE)		

# WEF/ASCE Urban Stormwater Controls O&M Manual – SW AM Chapter

- Overview of Asset Management
- Evaluate Current State of Assets
- Identify Appropriate Level of Service
- Evaluate Critical Assets
- Evaluate Investment Strategies
- Evaluate Long-Term Funding Options
- Adaptive Management

# Current National SW AM Research Project

# WEF Stormwater Questionnaire Results

Do you have a dedicated Asset Manager and/or AM steering committee?

■ Yes ■ No ■ Unsure/Blank

■ Have prepared a State of the Assets report  
■ Have not prepared a State of the Assets report  
■ Unsure/Blank

Half are not part of an enterprise wide AM program.

# WEF Stormwater Questionnaire Results

**Common SW AM  
Tools/Templates  
Currently Used:**

In-house  
Checklists/Forms

Excel  
Spreadsheets

GIS/CMMS

# Previous Efforts to Develop Targeted Stormwater Asset Management Project

- Develop Stormwater Strategic Asset Management Tools and Guidance
- Nationwide participants will advance the use of stormwater asset management with a particular emphasis on natural and built green elements

THE  
Water  
Research  
FOUNDATION

# Research Concept

**Identify gaps  
in knowledge and  
application of  
AM principles to  
stormwater/GI and  
develop tools and  
guidance for  
community use**

**Stormwater assets present unique challenges including natural components that must be managed to ensure performance**

# Green Infrastructure Leadership Exchange (GILE) SW AM Research Project

## Current GILE Initiatives

- GSI & Equity Learning Circle
- Local Governments and Nonprofit Water Agencies Learning Circle
- GSI Maintenance
- GSI Procurement
- GSI Workforce Development
- Using GSI to Advance Sustainability & Climate Resilience

## SW AM Research Project

- Team includes GILE, Arcadis and HDR
- Focused on development of SW AM tools and guidance materials for all communities

# Green Infrastructure Leadership Exchange (GILE) SW AM Research Project

The research will comprise the following steps:

- 1. Conduct survey of GILE members and other interested parties on asset management and confirm project goals (2025)**
2. Determine current state of the industry and identify potential information gaps of current GILE Toolkit (2025-26)
3. Evaluate and summarize stormwater asset management to develop a standardized framework and approach (2026)
4. Develop the tools, checklists, approaches and related data needed to address the identified gaps and support the standardized framework (2026)
5. Share results among participants in a learning forum and finalize guidance (2026-27)

# Green Infrastructure Leadership Exchange (GILE) SW AM Research Project

- Survey released in late October
- Survey went to GILE members, but **other interested parties will also be able to participate**
- In discussions with US EPA Four Centers of Excellence for Stormwater Control Infrastructure Technologies to make survey available in each region:
  - Southeast (Center for Watershed Protection)
  - Southwest (Southwest Center for Stormwater Technology/Board of Regents Nevada System of Higher Education)
  - Great Plains Stormwater Center of Excellence (University of Oklahoma)
  - Cold Climate Center of Excellence (University of New Hampshire)

# Green Infrastructure Leadership Exchange (GILE) SW AM Research Project

As a project participant, you will also have opportunities to directly contribute to the research effort.

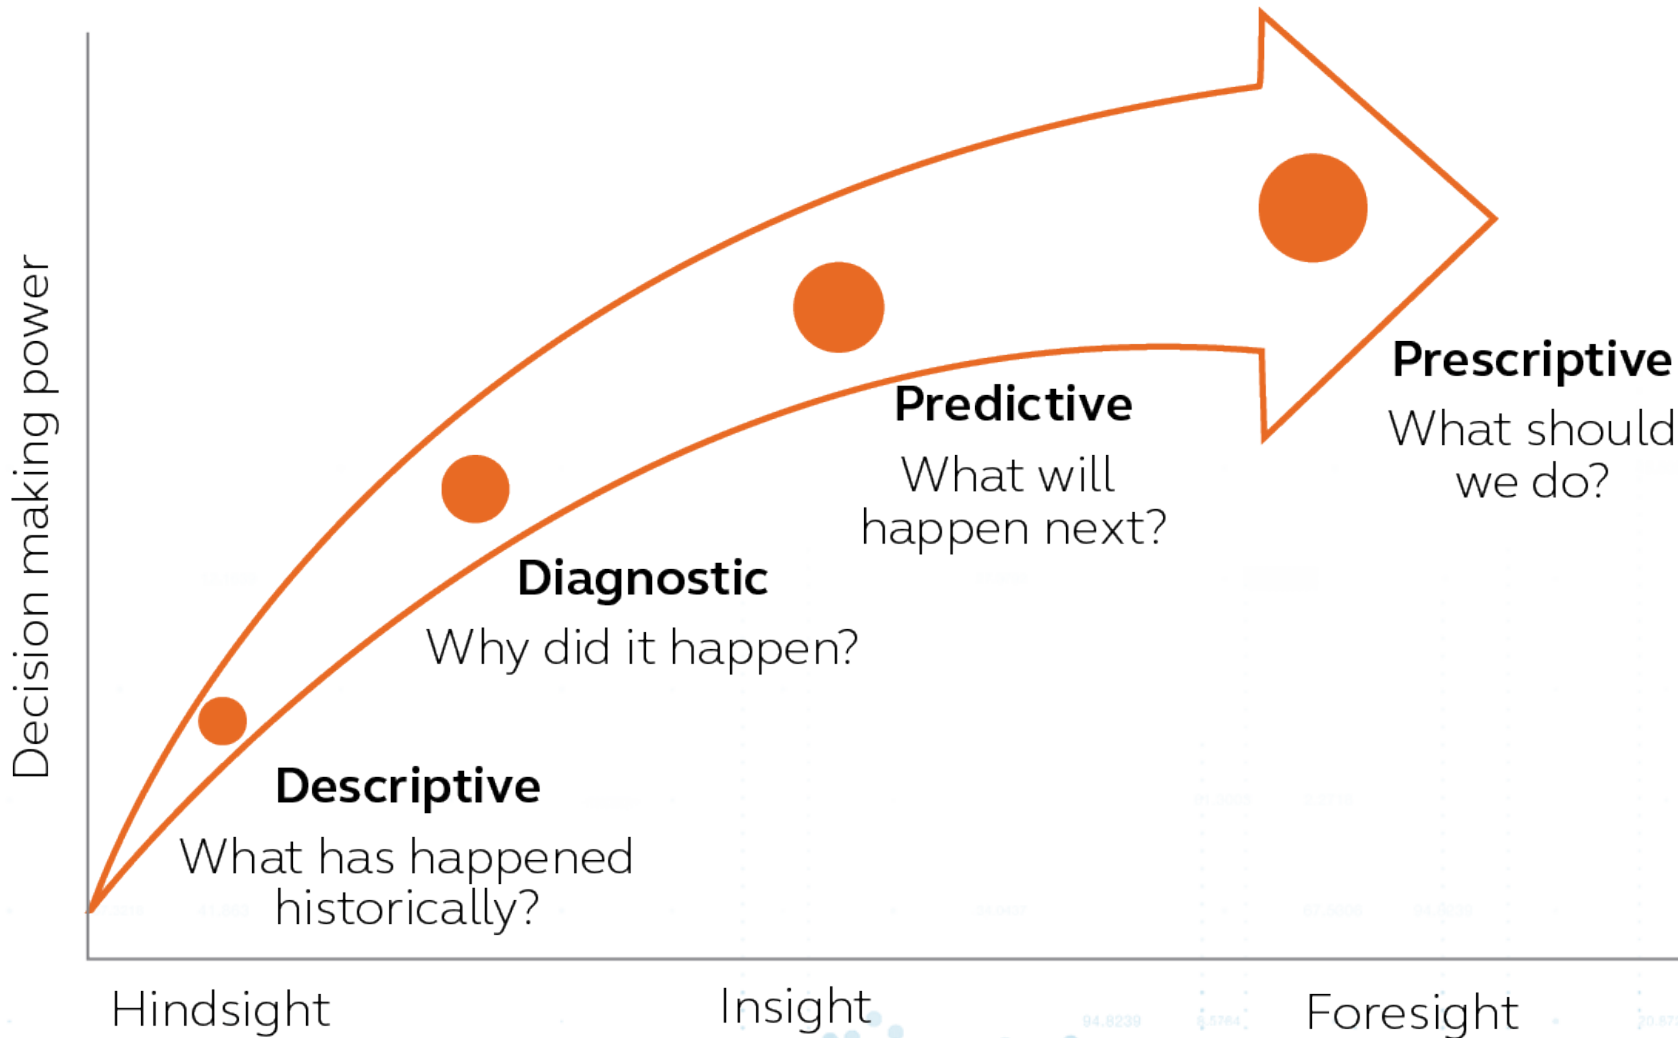

1. Providing survey response with data, needs and related case studies from your community on stormwater strategic asset management. (up to 4 hours)
2. Participating (either in person or remotely) in two workshops to develop state-of-the-industry framework and guidance materials. (up to 16 hours)
3. Reviewing the draft final work products. (up to 8 hours)

# What's Next? – Data Visualization/ Analytics Tools

# Leveraging Analytics

- Analytics is the use of data to deliver insight & support better decision making
- For AM, analytics combines mathematics & statistics, data techniques and advanced algorithms to quantify and predict performance, risk, condition, service, cost & revenue
- Analytics is most effective when presented with rich data visualization to communicate insight

# Analytics 101

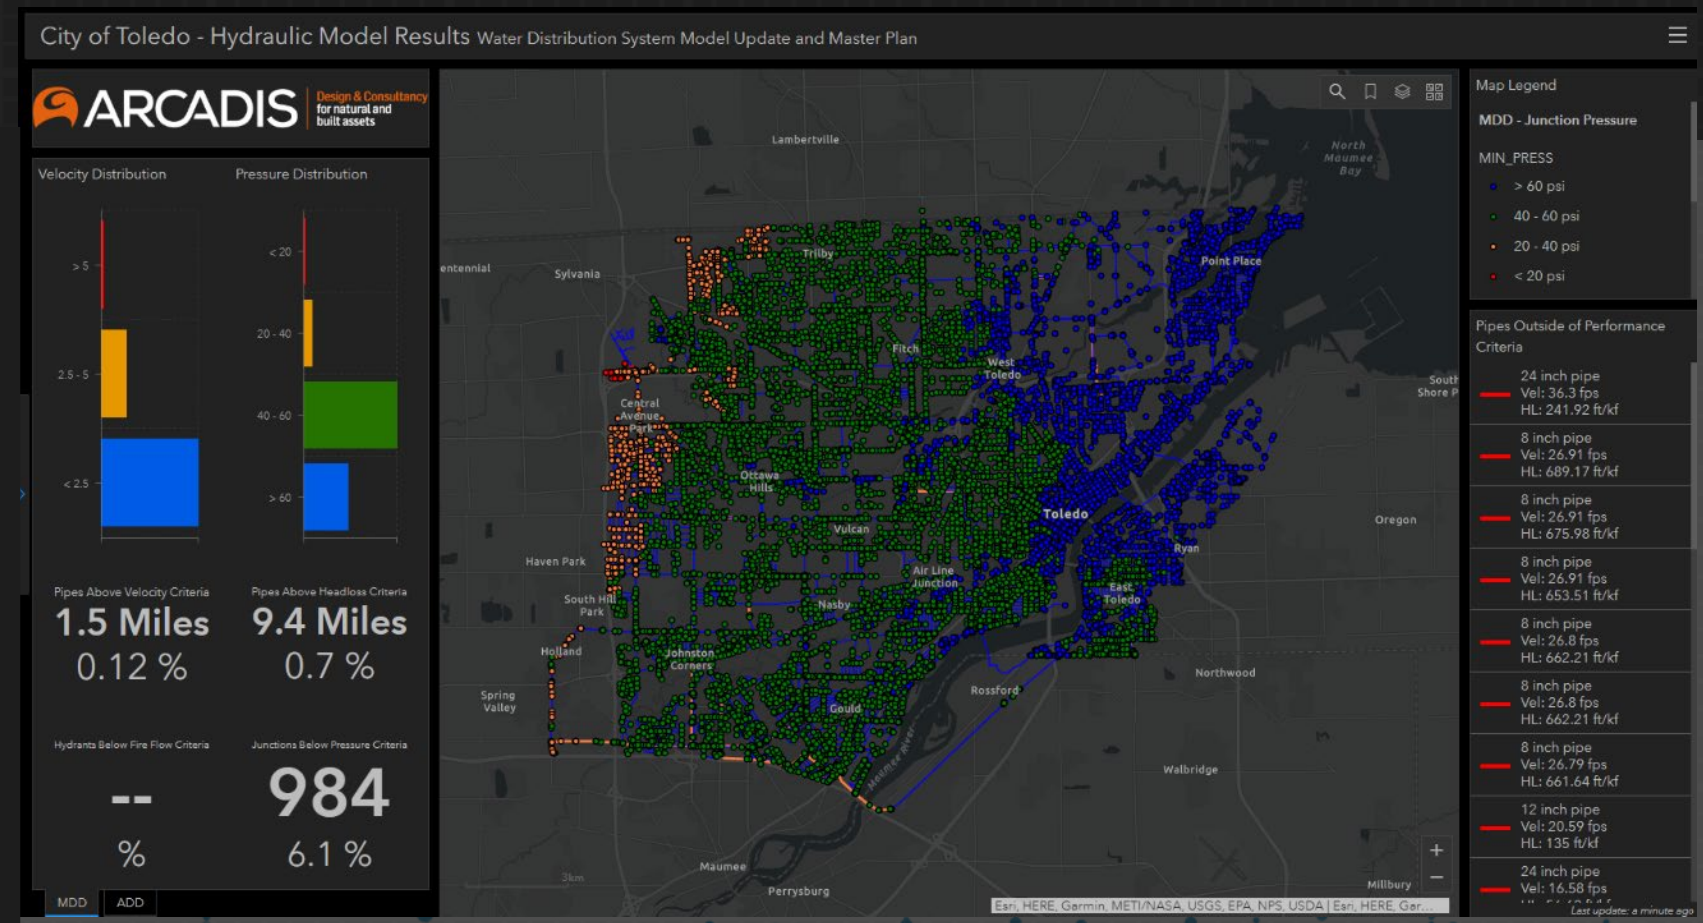

# Visualization: Walk before you Run

## WHAT & HOW

Less raw data, more insight  
Many applications for simple  
dashboard development

## BENEFIT

Increase the value of your  
data efforts through basic  
visualization and  
development of dashboards

# Data Collection Monitoring

## Arcadis Facility Condition Assessment Dashboard

### Asset Count by Facility and Asset Status

Asset Status ● Inspected ● Outstanding

1,595 Assets

### Asset Count by Field Code

### Asset Count by Status

### Asset Count by Assessment Type

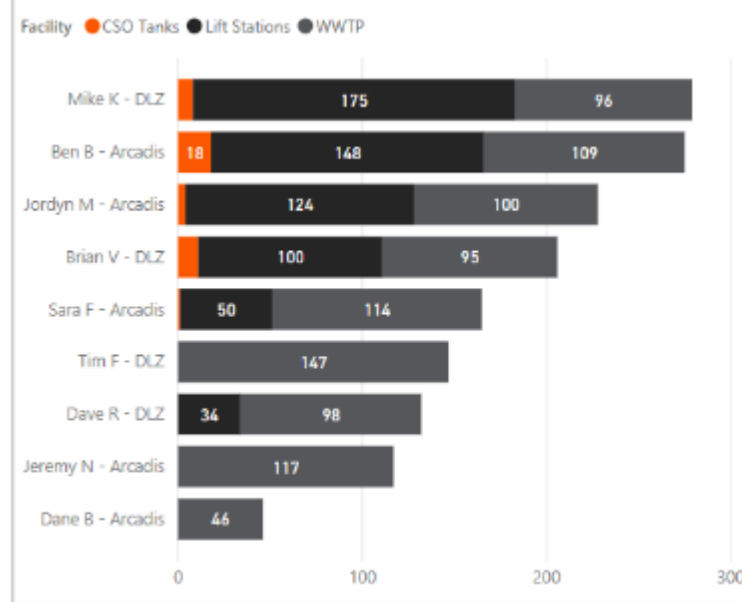

Facility	Area	Process	Asset	Max C...	Photos
WWTP	Disinfection	Facility Support	Alarm Annunciator Panel 2		
WWTP	Plant Wide	Old Chlorine Building	Chlorine Building Roof		
Lift Stations	Cottage Ct	Pumping	Level Transducer		
Lift Stations	High Dive Park	Pumping	Level Transducer 2		
WWTP	Primary Clarifiers	Facility Support	Primary Building Roof		
WWTP	Digestion	Digestion	West Digester 3 Cover		
CSO Tanks	New Jackson	Storage	Wetwell		
WWTP	Final Clarifiers	Secondary Settling	Float Switch 2		
WWTP	Aeration Tanks	Aeration	Gate 4A, Aeration Tank 4 (Abandoned)		
WWTP	Plant Wide	Westside South Storage Building	Unit Heater 1, Westside South		

### Asset Count by Physical Condition

### Asset Count by Inspector and Facility

# Are We Meeting Our Preventative Maintenance Targets?

## Lucity CMMS Performance

### Planned Maintenance Percentage

Planned Maintenance Percentage (Percentage of Preventive Maintenance Labor Hours) over Time

Labor Hours by Reason

Planned Maintenance Percentage

Reason	Workorders	Average Hours
<b>Repair</b>	<b>1</b>	<b>175.00</b>
Investigate	1	175.00
<b>Corrective Action Repair</b>	<b>5576</b>	<b>5.47</b>
Mainline Replacement	3	113.33
Mainline Blockage	1	30.00
Flow Restriction	1	24.00
Damaged Handrail	1	23.00
Water Shutdown	22	21.41
Erosion	9	17.50
Sunken Trenches	2	17.00
Valve Broken	17	16.90
Wet Weather Event	1	16.00
Drive Chain Loose	3	14.33
Water Quality Free Chlorine	1	14.00
Wet Tap NOB	1	14.00
Debris	45	13.18
Building Modification	37	13.00
Blockage	66	11.60
Meter Lid Damaged	6	11.00
Equipment Not Running	24	10.48
Broken Mainline	5	10.30
Low Chlorine	4	9.63
Establish Potable Service NOB	3	9.50
Fading	2	9.50
System Interruption	3	9.33
Corrosion	15	9.13
Unable To Cut Off	9	9.03
Infiltration	10	8.95
Low Water Pressure	18	8.82
Sunken MH	7	8.79
Excessive Vibrations	16	8.78
<b>Total</b>	<b>62327</b>	<b>3.20</b>

# What Assets Consume Our O&M Dollars?

## Lucity CMMS Performance

### Work Order Cost

Work Order Cost Over Time

Reason ● Corrective Action Repair ● Preventive Maintenance ● Reactive Repair/Response

Work Order Cost by Problem Type

Reason ● Corrective Action Repair ● Preventive Maintenance ● Reactive Repair/Response ● Repair

Work Order Cost by Department

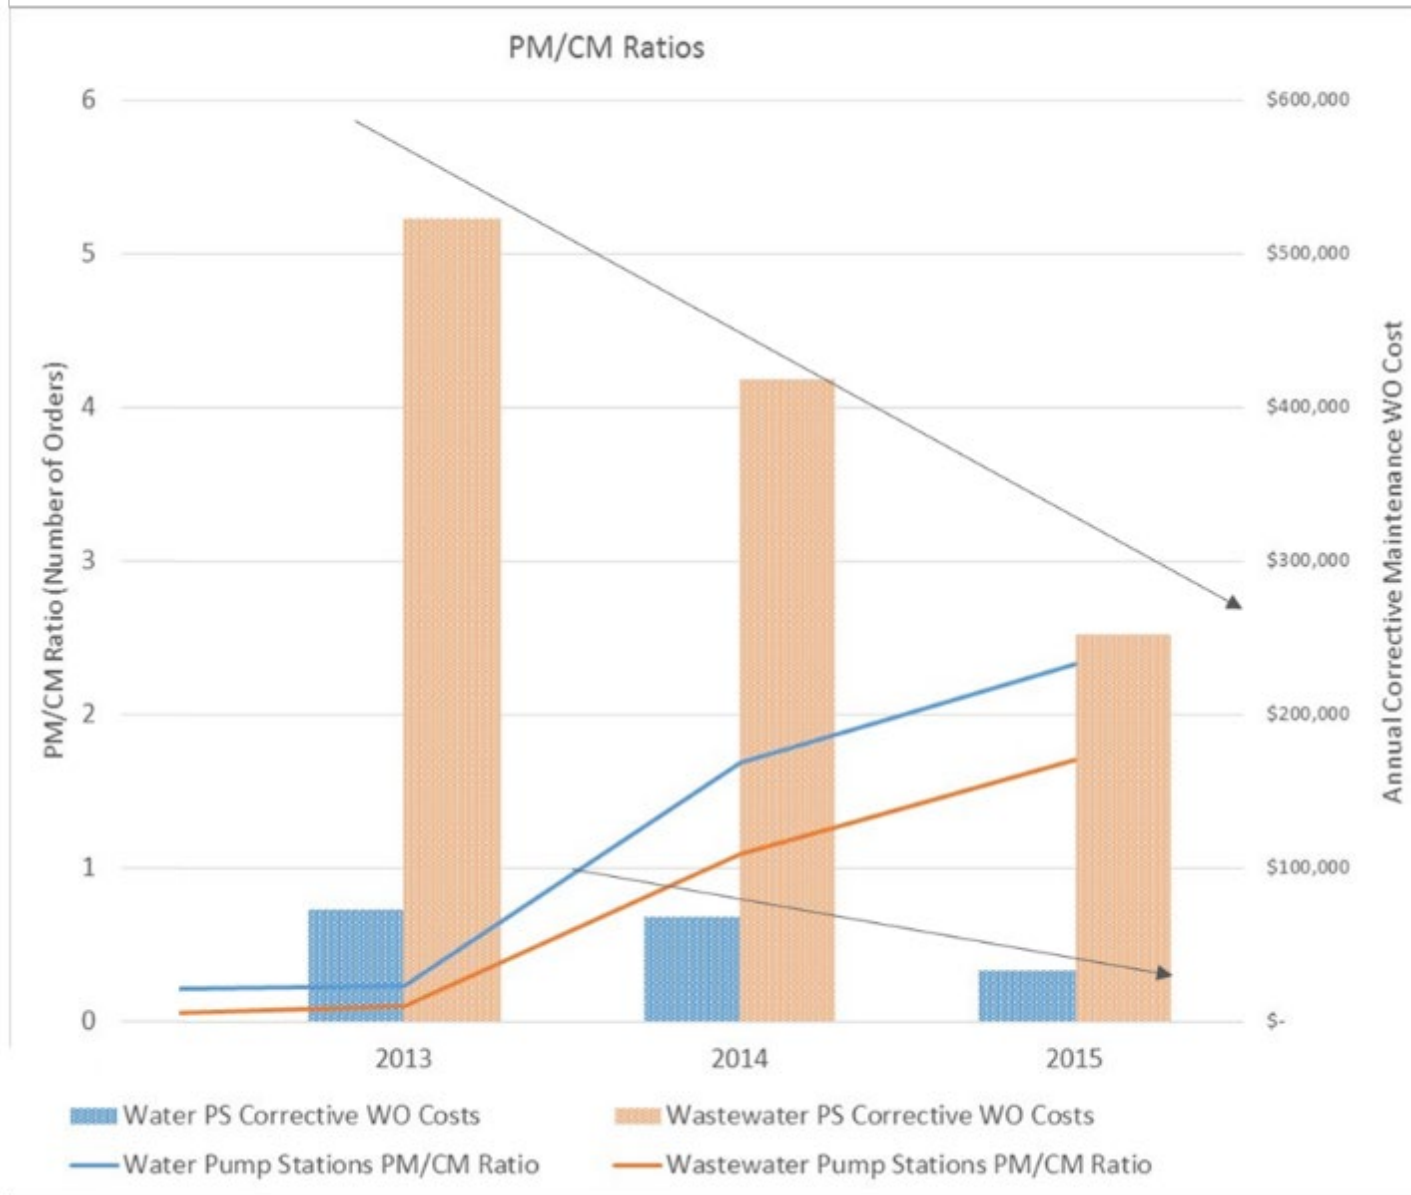

Reason ● Corrective Action Repair ● Preventive Maintenance ● Reactive Repair/Response ● Repair

# Maintenance Lagging KPIs Inform CAPEX Planning

# Comparison of Planned vs Corrective Maintenance Cost

- PM/CM is an effective leading indicator
- CM costs fell sharply as PM/CM ratio increased
- CM cost fell almost 50% in three years

# THANK YOU!

# Questions?
